E. 2-Motor Car Equipped With a Swivel Wheel

Page 17

A. 2-Motor Car

Required Pieces:

Step A.1: NXT Preparation

Side Views

Attach a double black connector peg and a single black connector peg to both sides of the NXT. Connect the double peg vertically in the top most holes. The single peg should be connected in the middle horizontal hole. Your NXT should look like the below picture before moving on to the next step.

Step A.2: Attach Motors to the NXT

Side View

Top View

Attach the motors (one per side) to the NXT using the double black connector pegs and the short black connector pegs attached to the NXT. The red dots in the side view identify which holes on the motor attach to the pegs. Your NXT should look like the below picture before moving on to the next step.

Note: The top connection of the double black connector peg is not connected to anything.

Step A.3: Support Motors

Take an 11-holed rounded beam and attach two short black connector pegs to the outside holes as seen in the **red** square. Connect the pegs to the back of each motor (as identified by the **red** dots) to further support the motors to the NXT. Your NXT should look like the below picture before moving on to the next step.

Step A.4: Attach Wheels

Assemble 2 rear wheel assemblies using a 6-length axle, a wheel, and a hub. Attach one to each motor as seen below.

Step A.5: Front Wheel Assembly Base

Take an L-beam and attach a black connector peg to the first and third hole on the smaller part of the L. Take a small L-beam and attach a black connector peg to the first and third hole on the larger part of the L. In the second hole between the two connector pegs on each L-beam, attach an extended black connector peg. Also attach a friction axel to the fourth hole on the small L-beam. Now attach two small L-beams to the protruding pins below the other L-beams. Attach a black connector peg to the second hole on the small part of the L. Now attach an axel joiner on each of the protruding connector pegs below the small L-beams. Then, align the wheel between two half bushings and slide the 5-axel through the axel joiners.

Step A.6: Front Wheel Assembly Attachment

Connect the front wheel assembly to the bottom of the NXT at the protruding connector pegs.

B. Equipped With a Light Sensor

Required Pieces:

Car from Step A.6

Step B.1: Light Sensor Assembly

Insert a black connector peg into the first and third holes of the 5-hole beam and an extended black connector peg into the fourth and fifth holes. Attach an axel joiner to the extended black connector pegs. Insert a friction axel into each hole of the axel joiners and attach the light sensor to the friction axels.

Step B.2: Attach Sensor to the Car

Attach the light sensor to the car from Step A.6. The 5-hole beam should connect to the top of the L-beam on the front wheel assembly.

C. Equipped with a Touch Sensor

Required Pieces:

x1

x2

Car from Step A.6

Step C.1: Touch Sensor Assembly

Attach the two black connector pegs to the first and third holes of the touch sensor.

Step C.2: Attach Sensor to the Car

Attach the touch sensor assembly to the car from Step A.6. The sensor should attach to the top of the L-beam on the front wheel assembly.

D. Skid ‘Wheel’

Required Pieces:

Car from step A.4

Step D.1: Skid 'Wheel' Assembly

Take an L-beam and attach a black connector peg to the first and third hole on the smaller part of the L. Take a small L-beam and attach a black connector peg to the first and third hole on the larger part of the L. In the second hole between the two connector pegs on each L-beam, attach an extended black connector peg. Also attach a friction axel to the fourth hole on the small L-beam. Now attach two small L-beams to the protruding pins below the other L-beams. Attach a black connector peg to the second hole on the small part of the L. Now attach an axel joiner on each of the protruding connector pegs below the small L-beams. Then, align the skid 'wheel' between two half bushings and slide the 5-axel through the axel joiners.

Step D.2: Attach Skid 'Wheel' to the Car

Connect the front skid 'wheel' assembly to the bottom of the NXT at the protruding connector pegs. Follow the steps in Part B and Part C to attach sensors.

E. Swivel Wheel

Required Pieces:

Car from step A.4

Step E.1: Swivel Wheel Assembly

Take an L-beam and attach a black connector peg to the first and third hole on the smaller part of the L. Take a small L-beam and attach a black connector peg to the first and third hole on the larger part of the L. Align a bushing over the second hole on the small L-beam. Align a half bushing followed by a bushing, 4-connector peg, and another half bushing below the second hole on the small L-beam. Slide a 5-beam through the bushings and connector peg. Attach a wheel to the 4-connector peg.

Step E.2: Attach Swivel Wheel to the Car

Connect the front swivel wheel assembly to the bottom of the NXT at the protruding connector pegs. Follow the steps in Part B and Part C to attach sensors.
